

Interratron - Using EyeDirect and Video Conferencing (Webex, Zoom etc)

*requires reliable wifi or cellular hotspot

This is a remote version of the classic two person interratron interview setup using video conferencing to bring the interviewer and interviewee together. It requires 3 participants in the video conference. This is because the webcam on iPad used in the Eyedirect (which shows interviewers video and audio) is unusable . So we use the production camera SDI video and audio output as the 3rd participant webcam to send to the interviewer. We do this by taking the SDI signal and converting it to a USB webcam feed.

Participant #1 - Interviewer

Their laptop shows full screen image of the interviewee. With an inset of themselves for positioning

Participant #2 - Interviewee

This laptop shows a full screen image of interviewee captured from Production Camera.

Participant #3 - iPad in Eyedirect

This shows full screen image of interviewer to interviewee. Audio is output to a small external speaker just below the EyeDirect

Equipment Needed:

- 2 x Laptops, 1x iPad
- 1 x EyeDirect (with iPad holder)
- 1 x AJA U-Tap or similar device to convert SDI signal to Webcam
- 1 x External Audio Speaker with Mini Phono Jack
