

**Teradek Cube - Viewing on Mobile Device with Teradek Vuer App
- Access Point Mode**

This allows a mobile device to connect to an 'Access Point' network created by the Teradek Cube. The benefit of using an 'Access Point' network is you do not have to keep connecting multiple devices to local wifi networks if your shoot is moving locations. Set up and maintenance is arguably much easier.

However Access Point networks locks you out of using the internet. So you will be unable to share the feed from your device over the internet.

VUER is an iOS or Android application that allows you to monitor video feeds in real-time, all in 1080p HD. With a built-in histogram, false color, focus peaking, waveform monitor and vectorscope.

Teradek Cube Setup:

- Menu > System Setup > Factory Reset > **All**
 - Menu > Network Setup > WIFI > **Access Point** Mode
 - Menu > Video Setup > Codec > **H.264**
 - Menu > Streaming Setup > Primary Stream > **Live:Air**
 - Menu > Audio Setup > **Embedded**
- (Home screen shows status '**Ready**' on top right)

Mobile Device Setup

Install Teradek Vuer App on your mobile device.

On your mobile device or tablet, connect to the Wifi network the Teradek Cube has created. ie:Teranet-XXXX.

Teradek Vuer App > Camera
